8.  Examiner's Statement of Reasons for Allowance

9.  Other \_\_\_\_\_.

***Reasons for Allowance***

1. Claims 1, 3, 7-8, 10-11 and 13 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. Per independent claims 1 and 13: independent claims 1 and 13 include limitations relating to a blood access device comprising an elongated body provided with a recess and a wall defining a well, a pair of shutters housed within opposed pockets, said shutters including a horizontal portion housed within the pocket, and a vertical portion and further including through holes provided at the vertical portions of the shutters in combination with a longitudinally extending through hole with first and second conduits and further in combination with a pair of vertical through holes communicating with the first through holes when the shutters are open and out of communication when the shutters are slid toward each other and further including a cannula assembly including a pair of cannulas, one end of each cannula provided with mounting adapters, said adapters being provided with locking members.
4. The closest prior art uncovered during examination discloses the following elements:
5. US Patent 6,231,541 issued to Kawamura: teaches body, well, apertures or through holes in body portion, Kawamura does not teach the shutters having vertical through holes provided at the vertical portions of the shutters, the vertical portions of the shutters comprise one slideable opening, thus providing a different mode of communicating with the vertical through holes in an upper wall of the body portion.
6. US Patent 3,358,961 issued to Montgomery: teaches slideable valves comprising a shutter provided with through holes. Montgomery does not teach the slideable valve in a device assembly.

7. US Patent 6,997,914 issued to Smith et al: teaches a bowl shaped body provided with a well or reservoir, a rotatable valve comprising an outlet which can be rotated into registration with a through hole extending radially through a portion of the bowl hemisphere. Smith does not teach slideable shutters, cannulas, adapters.

8. While the prior art discloses various elements of blood access devices, none disclose or fairly suggest a device comprising an elongated body provided with recess, wall and well, said body further comprising vertical through holes and in combination with shutters having horizontal portions slidably housed within pockets in the housing, said shutters further having vertical portions provided with through holes in communication with a longitudinally extending through hole with conduits, cannula assembly and mounting adapters and locking member as now specifically recited in independent claims 1 and 13. These features render the claimed invention nonobvious over the prior art of record. Claims 3, 7-8, and 10-11 are allowable as being dependent from independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
